

digital net preamble:

QST QST QST this is _____ welcoming all to the digital training net.
This net meets every Sunday immediately following the voice net on 147.045.
All that is needed to participate in this net is a transceiver capable of receiving the transmissions and a computer with appropriate decoding software. Details on the program needed to decode the messages can be found at the club website www.W8CCA.org in the digital modes section.

This is a directed net and all participants are to operate under the direction of net control. Any level of expertise is welcome to participate. Newcomers are especially welcome! We have a growing base of knowledge on this subject and are happy to share it. We operate on HF and VHF bands. Sometimes through repeaters, other times simplex.

Stations are encouraged to send messages as well as receiving them. We typically use the program FLMSG to compose and process messages.

We will now take checkins for the digital net. please give your call, name and whether you have traffic for the net.

First item tonight. Does anyone have questions or issues related to FLDIGI, FLMSG. or FLAMP?

All stations should have rx/txid turned on.
Net control will announce the mode used and send a test tone for stations to line up to. Then follow with a short line of text to make sure all stations copy.
reception reports are recommended.

We can now send traffic...

reports and comments:

Close the net.
Thanks to all participants this evening. I hope we all learned something or helped someone else. this is _____ returning this frequency to regular amateur use, good evening. Come back next week!
